Clinical Decision Support

Alert Review Committee Update

New Discern Alert Anticholinergic Duplication

On **Tuesday, October 13th** an ambulatory ordering alert will appear when two active anticholinergic medications are ordered for patients age 65 and older. The alert will not trigger when the medications are the same drug.

This enhancement supports safer prescribing by providing timely notification at the point of ordering, allowing clinicians to review potential anticholinergic burden and reduce the risk of adverse effects in older adults.
