Future Changes

To Be Determined

➤ Allergies will be updated with a new look and feel for a more user-friendly experience.

- No changes to the MPage component at this time. The update will occur in patient's charts, forms, scheduling appointment book, PharmNet, and RadNet.

➤ Reverse Interaction Checking will automatically run each time new allergies are entered and can be run at any time by clicking Reverse Allergy Check button.

- **Interaction is found:** Red warning populates with details. This is not auto dismissed.
- **No interaction is found:** Green checkmark with text **Success. No Drug Interaction found.** This message will auto-dismiss after 5 seconds.

➤ MyExperience Replacement

- **MyExperience will be replaced with Role Profiles.** In the future, if more than one role exists, there will be a prompt to choose a role when logging into an application.

➤ Clinical Entry Workspace is a new functionality called Integrated Charting which provides workflow efficiencies.

- Located on the right side of the MPages.
- Providers and nurses will document components that feed their Dynamic Documentation Notes and the Patient Discharge Summary.
- Provides an efficient method to search for and open PowerForms.
 - PowerForms can be saved as a favorite.
- View PowerForm documentation.
