## Flexitest Order Details

The Laboratory has reported an increase of Flexitest order errors. Avoid these errors by entering the Flexitest order details in the appropriate fields.

Enter the **Quest Order Code** in the **Order Codes:** field and the **Quest Test Name** in the **Test Name** field.

Click here for more information regarding Quest Flexitest.
## Provider Note – Co-Signature

If a Provider Note is sent to a secondary Provider for Signature, their line will read **Electronically Co-Signed By**. In addition, the **On** field displays blank until the note has been signed. This advantage is the ease to see if a note has been Co-Signed or is still waiting for Co-Signature.

## Pressure Injury Documentation Reminder…

After a pressure injury has been validated by a wound nurse or provider, nursing or other clinical staff should NOT change the **Abnormality Type** of **Validated Pressure Injury** and the other information that populates unless there is a suspected change in the pressure injury.

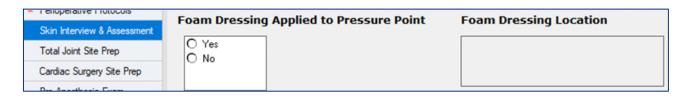

If a change in the wound is suspected, the nurse or other clinical staff should change **Abnormality type** to **Pressure Injury – Suspected Change**.

# Preprocedure Checklist: Foam Dressing Location

Starting July 24, if perioperative staff apply a foam dressing to a pressure point, they will be able to document the corresponding location in the Preprocedure Checklist PowerForm. A new free text field labeled **Foam Dressing Location** can be found with the corresponding question **Foam Dressing Applied to Pressure Point**. The new Foam Dressing Location documentation will remain dithered until staff select **Yes** that a foam dressing was applied to a pressure point.

# Behavioral Health Outpatient MTP Form

On July 24 a new column, **Discharge Date**, will be added in the **Current Programs** grid of the **BH Outpatient MTP Form** to document and communicate with other programs that the patient is no longer participating in that service.
