

Accelerated Learning Track Participant Details

Healthcare Professionals with Cerner EHR Experience

Welcome to Northern Light Health! To provide the most efficient electronic health record (EHR) education possible, and with your experience using Cerner we have assigned you an accelerated learning track. This incorporates abbreviated coursework and a test-out feature. This flyer provides an overview of what you can expect.

We have whittled down the education to what's most important. You will find the required education in the section on the **My Learning Assignments** page named something similar to, "Acute Registered Nurse-Accelerated." (The exact name varies, depending on where you will be working.) Specialty required and "basic" courses are available in the **Elective Assignments** section on the same page.

Within the assigned curriculum, you will find a **pretest** located **at the bottom** of the curriculum and allows you to "test out" of much of the assigned simulation coursework. It cannot be opened until the required prerequisite courses have been completed. The pretest is broken up into "Tasks." Each Task is associated with specific courses.

If you achieve a score of **90% or higher on a Task**, you will be "signed-off" on the associated courses. If not, you will need to complete those after the pretest. You will know which courses you need to do, because they will remain incomplete within the curriculum and your learning gauge will not display with a closed circle (see Learning Gauge inset above).

The required prerequisite courses contain either, highly localized workflows or high-risk workflows and need to be completed before the pretest can be launched.

Thank you!
