

We're using a new scribing tool!

Complete and accurate health records are an important part of providing the best care possible. A comprehensive health record ensures a clear picture of your total health.

The scribing tool automates note taking for your electronic health record. Using this tool allows your provider to focus on you **and** capture the most accurate notes possible.

How it works

The tool captures information during your visit using a mobile device (phone or tablet) logged into a secure application. The information is saved as a draft in the electronic health record, where your provider reviews, edits, and ensures accuracy.

Frequently Asked Questions

Does this solution use AI?

Yes, this solution uses a type of AI or Artificial Intelligence also called Augmented Intelligence.

Can you tell me more about how this AI works?

The term AI is used to describe a very wide range of tools and functions.

In this tool, the AI in use is narrowly focused on grouping and organizing content for clinical notes based on the visit you have with your provider.

How is my personal health information protected?

This tool is a secure, HIPAA compliant application. It is protected using the same quality of security technology as other parts of the electronic health record.

Will my data be shared with third parties?

No, your data is not shared with any third parties.

Is any of my PHI data saved on the device?

No, no patient information is stored or saved on the device (phone or tablet).
