Updates to the Adult, Adult Crit Care, PICU, and Rehab System Assessment Interactive View and I&O bands are a result of the Pediatric Essential Clinical Dataset (ECD) work. The addition of new documentation fields, excluding from view documentation fields not being used, and using conditional logic to have documentation fields open when needed, will increase the efficiency of documentation with less scrolling.

Adult, Adult Crit Care, PICU, and Rehab System Assessment

➢ **Neurovascular Checks** is a separate section and no longer included in the **Neurological** section.

➢ **EENT**
- **Neck** and **Facial Movement** are new documentation fields.
- **Throat** now has an option to document **Bleeding**.

➢ **Cardiovascular**
- **Cardiac Symptoms** now has an option to document **Mottled**. When **Mottled** is selected, **Skin Abnormality Location** will open.

➢ **Respiratory**
- **Respiratory Pattern Description** has an option to document **Abdominal** in the drop down.
- In **Respirations,** documentation of **Retraction** or **Use of Accessory Muscles** will open **Retraction Location**. Severity and location are documented in **Retraction Location**.
  - **Muscle Use Location** has been removed.
- **Peak Flow** has been removed and is available for documentation in the **Respiratory Therapy** band in the **Bedside Spirometry** section.

➢ **Gastrointestinal**
- **Emesis Description** is conditional based off selecting **Vomiting** or **Vomiting Blood** in GI Symptoms.

➢ **Psychosocial**
- In **Psychosocial Symptoms**, if **Hallucinations** is selected, **Hallucinations Present** will open.
- **Suicidal Ideation** has been removed from **Suicidal Thoughts** and is an individual documentation field.

➢ **Homicidal Assault Risk Assessment** is a new section.

➢ **Pain Assessment**
  - **RIPS Pain Scale** has been moved from **Able to Self Report** to **Unable to Self Report**.
