**Northern Light Health** sm

---

Optimization of Respiratory Therapy Documentation is happening on December 9, 2019. These changes will improve their workflow and retire antiquated tools and processes. Because Nursing and RT share a variety of documentation elements, nursing will see a few minor changes in iView as documentation needs are aligned.

Documentation Changes

➤ Respiratory Therapist and Assisted Ventilation iView bands are being replaced with one band titled **Respiratory Therapy**.

➤ Other iView changes

- Oxygen Delivery

  ▪ Nursing will see a conditional logic symbol in front of Oxygen Delivery but will not see any conditional logic documentation fields open.

- For some Member Organizations who charge for Oxygen, only the Respiratory Therapist will have an RT Charge Oxygen documentation field open when documenting Oxygen Delivery.

➤ ABG Draw Task

- The ABG order will be seen in Care Compass as orders that need to be Marked as Reviewed, alerting nursing that an ABG needs to be drawn.

- Communication between the RN and the Respiratory Therapist should take place over who is to draw the ABG.
