FetaLink is a maternal and fetal monitoring system that facilitates the flow of data from medical devices in a manner that supports display needs of clinicians in the acute and ambulatory setting. When a patient is pregnant with triplets or quadruplets, a second fetal monitor will need to be added.

Adding a Second Fetal Monitor

**STEP 1**: From the patient's chart within the FetaLink chart, select **Monitor Association**.

STEP 2: Select the location and **Apply**.

STEP 3: To add the second monitor, scan the second monitor or select the **Monitor Search** link (on the **Monitor Association** box).

STEP 4: Address the pop-up warning verifying the addition of a second fetal monitor? Click **OK** to proceed with adding the second fetal monitor?
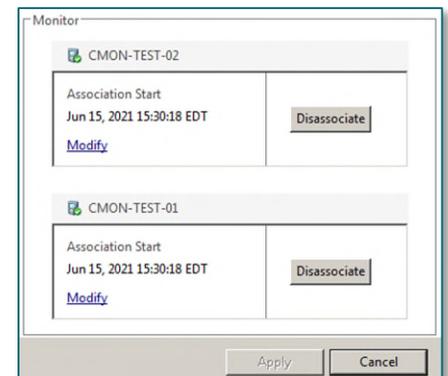

- If adding the second fetal monitor manually, select the correct (2nd) fetal monitor from the list of available monitors and click **Apply** to complete the selection.
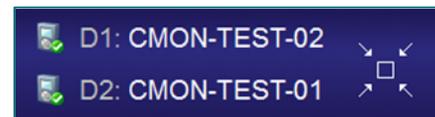

STEP 5: Both fetal monitors will display in the Monitor Association box the patient will be associated with. Verify the monitors are accurate.

STEP 6: Select **Apply** to complete the association.

NOTE: **Triplets and Quadruplets require two fetal monitors but will display on one fetal strip.**

➢ Currently FetaLink does not support triplet monitors, so a second monitor will need to be added.

➢ Both monitors will display in the demographic banner for the patient.

STEP 7:   If the encounter wasn't selected when beginning the process, select the encounter for the patient that will be monitored.
