The Anesthesia Dashboard is comprised of 3 components that display as pie charts: Breaks, Anesthesia Not Finalized Record, and Anesthesia Concurrency.  The dashboard offers an interactive real-time display of data for management of clinical workflows and documentation for Anesthesia providers. Select the correct facility from the drop-down options to begin.

## Breaks

The component will flow from all personnel that documented in the Surginet Anesthesia for the day.  If used, it will show the following information:  Breaks Received and Breaks Needed.

➤ Clicking the component will open the **Details: Breaks** window with a listing of the staff members who met the requirement.  Right-clicking a name will populate the **Actions** box.

## Anesthesia Not Finalized Record

The component will display all active non-finalized anesthesia records which meet one of the following criteria:

➤ An anesthesia record with an Anesthesia Stop Time documented where the current date and time, minus the Anesthesia Stop Date and time, exceeds the defined minimum timeframe.

➤ An anesthesia record with a documented Anesthesia Start Time greater than 24 hours ago, but no Anesthesia Stop Time is documented.
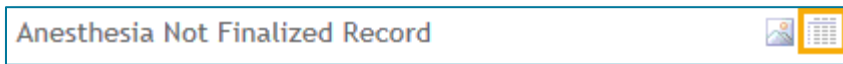

There are 3 sections to the pie chart:

- Greater than 8 hours.

- Between 2 & 8 hours.

- Less than 2 hours.

➤ Clicking each pie section will open more details as shown below:

➤ Additionally, in the right upper corner of the component, click the **Details** icon.  The details will include Case Number, Supervisor of Record, CRNA, and Patient Name.

- The Details window will allow sorting by clicking the header of the columns.  It also has a search feature (magnifying glass icon) to search for specific cases.

| NOTE: | It is recommended to check the component throughout the day to keep track of what records need to be finalized. |
|---|---|

## Anesthesia Concurrency

The information in this component flows from all Supervisor of Record documented within the Anesthesia Record with a start time.

➤ The icon in the upper right hand corner will give access to the detail table.  It displays the number of supervising anesthesia providers across the bottom of the graph.

➤ Hovering over a section in the bar graph will provide additional information.

➤ Once the supervisor anesthesiologist is assigned to more than the defined number of individuals or residents, the bar will display as red indicating the limit has been reached.
