

Electronic Notes filed incorrectly can be challenging to locate using the Oracle Health (Cerner) default filter of the clinical document tree structure. This flyer covers the additional filters in Notes to assist with finding documentation.

## Notes/Clinical Notes Filters

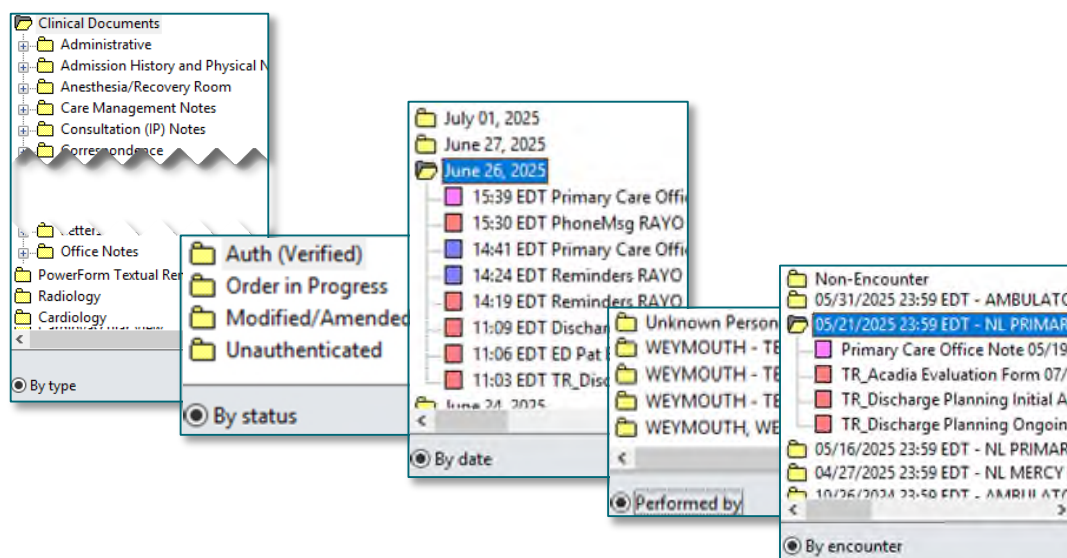

➤ From the dark side Menu, select **Notes**.

➤ **Filters**

- **By type:** useful in finding the note by document type.
- **By status:** filter is only helpful if the status of the note is known and therefore isn't useful when trying to locate a note filed incorrectly.
- **By date:** most useful in finding the note if the user knows the date the note was completed.
- **Performed by:** assist with finding the note faster if the author of the note is known.
- **By encounter:** would be used if the search is for a specific encounter.

**NOTE:** If the exit door is used while these filters are selected, they will become default for subsequent searches.

For questions regarding process and/or policies, please contact your unit's Clinical Educator. For questions regarding workflow, please [place a ticket](#) to Health Informatics. For any other questions please contact the Customer Support Center at: 207-973-7728 or 1-888-827-7728.
