TeleStroke Service Overview – Clinical Quality

Our attending staff members are all board-certified neurocritical, vascular, or general neurologists and provide the *highest quality 24/7/365 TeleNeurology coverage available.*

- 150+ Independently-funded research grants
- 1,000+ Peer-Reviewed Publications
- 1060+ Invited Presentations

Key:

	MGH Coverage
	EMMC Coverage

**Visual represents a standard week – MGH will provide full coverage on holidays including New Year’s Day, Memorial Day, Fourth of July, Labor Day, Thanksgiving Day, Christmas Day*

Operational & Clinical Workflow – Clinical Overview

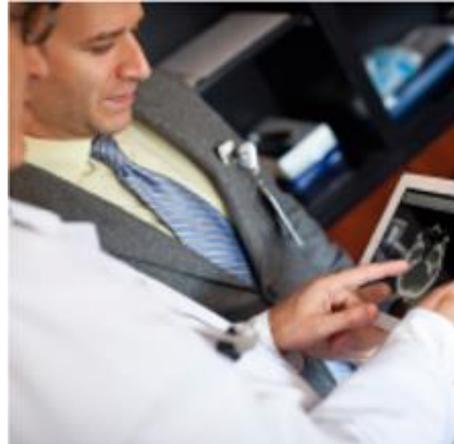

Step 1: Initiate Consult

When a patient with stroke symptoms is in need of emergent care, the spoke team pushes the patient's imaging and calls the TeleStroke answering service.

Step 2: Case Review

The Neurologist returns the call within 5 minutes to discuss the case and review images. The consult may transition to video where the neurologist will assess the patient with the assistance of local staff.

Step 3: Collaborative Decision-Making

Upon completion of the examination, the findings will be discussed with your team, and the patient and family if available. Together you will decide on a plan of care for the patient.

Step 4: Documentation

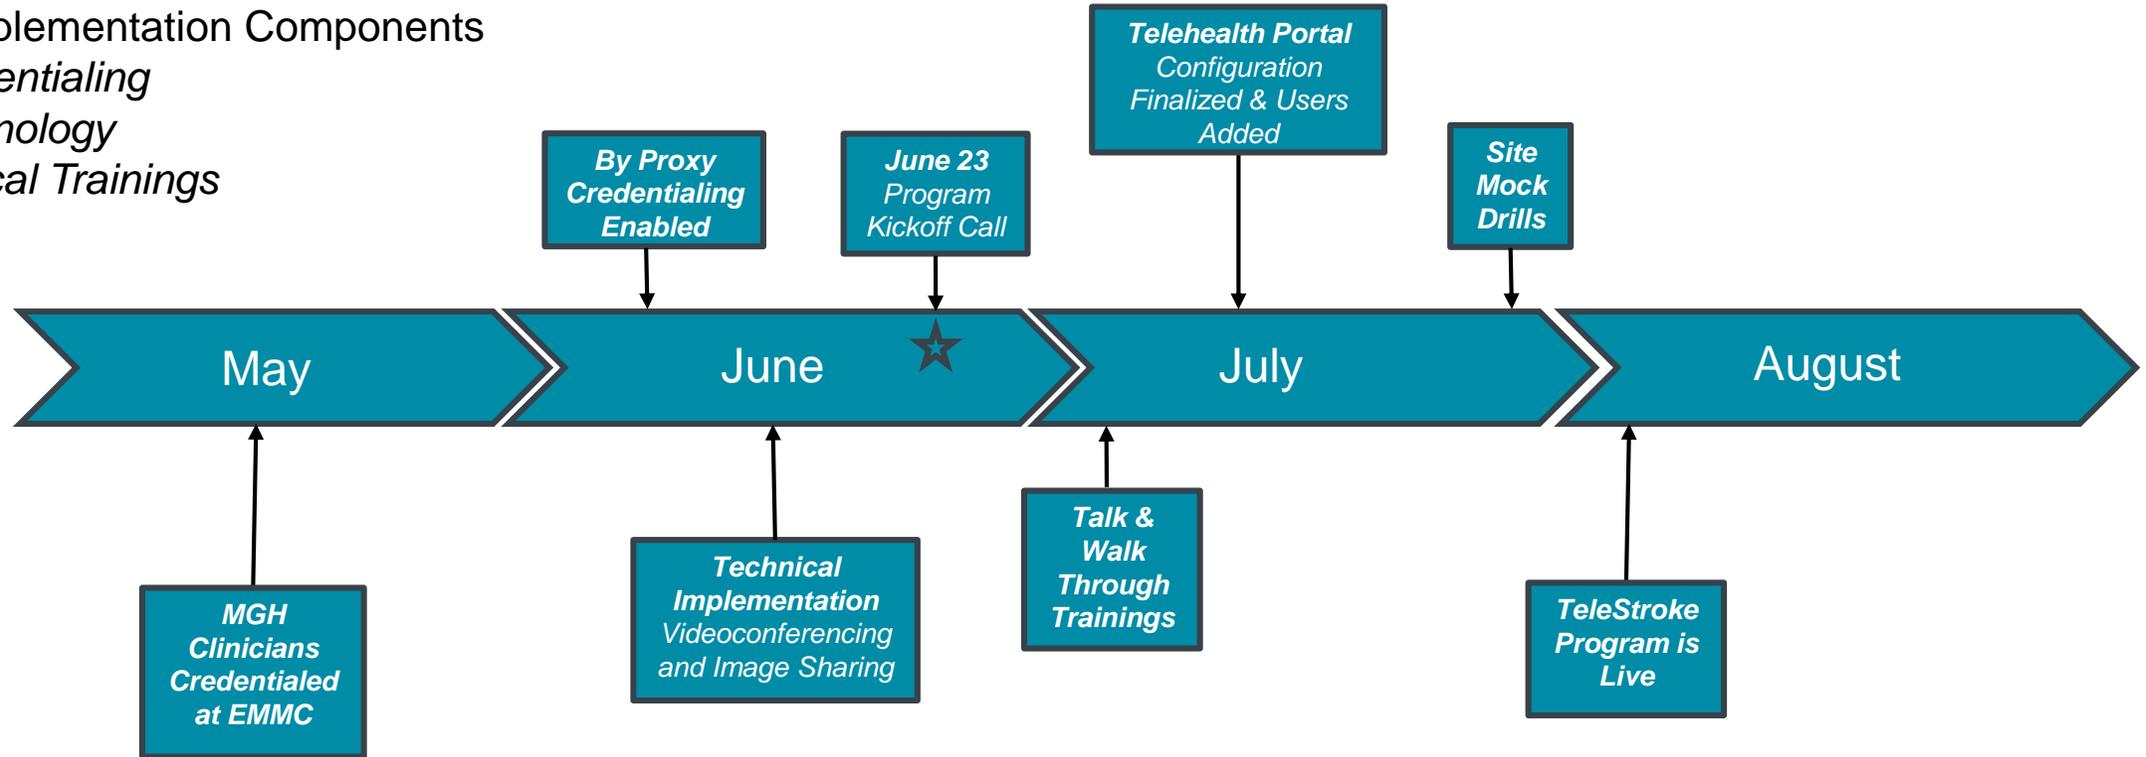

The Hub Neurologist will document their assessment of the patient and recommendations in the TeleHealth Portal. Consult notes are available for those with access to the portal, and will also be uploaded, manually or through API integration, into the EMR.

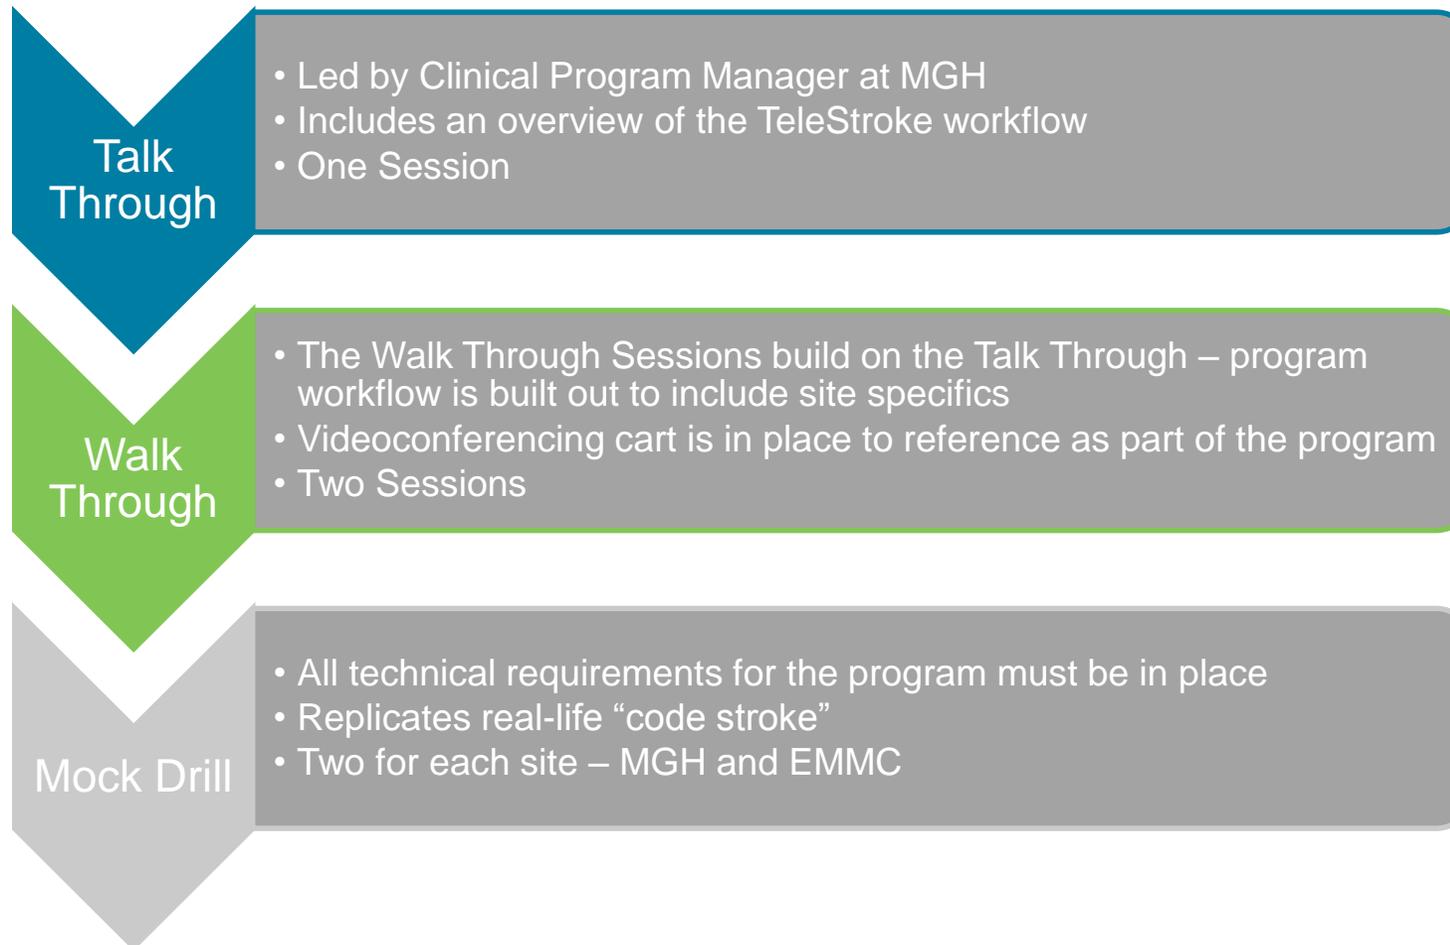

Implementation Process - Overview

Core Implementation Components

- *Credentialing*
- *Technology*
- *Clinical Trainings*

Clinical Trainings – Core Program

Participants

- ED physicians
- Nurses
- IT Support
- ED Staff
- Neurologists

...all those involved in requesting a TeleStroke Consult and documenting the encounter

Additional Training Components

Hub Provider Trainings

Group: EMMC Physicians
Providing TeleStroke
Coverage

Content: Provider-specific
training on the TeleHealth
Portal and Videoconferencing

Led By: MGH TeleHealth
Engineers

EMMC Clinical Kickoff

Group: EMMC Nursing Staff

Content: Localization of
stroke, Completing a Stroke
Scale, and Basics of
Endovascular Therapy

Led by: MGH Nursing
Educators

tPA Information

Stroke Expert Recommendations after acute stroke evaluation

TeleStroke-Video/In-Person tPA Risks And Benefits Language
Phone Only tPA Discussion

Eligible IV tPA? * Yes No

Recommend IV tPA? * Yes No

tPA Administered * Yes No tPA administered prior to TeleStroke consult

IV tPA Dosing Information

Patient Weight * lbs 0 Kg

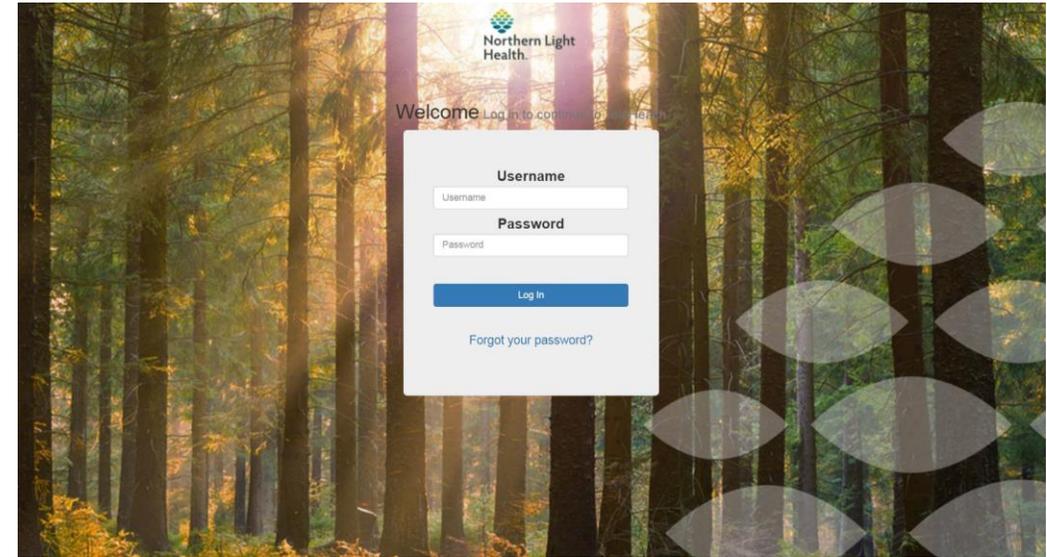

Patient Weight (lbs) lbs
Patient Weight (kg) 0 kg
Total Dose 0 mg
Bolus Dose 0 mg (given over 1 minute)
Infusion 0 mg (given over 1 hour)
Discard Dose 100 mg

tPA recommended at *

Bolus given at *

If tPA given >60 min from ED arrival, list main reason why

- Social/ Religious
- Initial refusal
- Care-team unable to determine eligibility
- Hypertension requiring aggressive control with IV medications
- Further diagnostic evaluation to confirm stroke for patients with hypoglycemia (blood glucose < 50), seizures, or major metabolic disorders
- Management of concomitant emergent/acute conditions such as cardiopulmonary arrest, respiratory failure (requiring intubation)
- Investigational or experimental protocol for thrombolysis
- Delay in stroke diagnosis
- In-hospital time delay
- Equipment-related delay

TeleHealth Reports

These tools are designed to empower service recipients and providers to make optimal use of the available TeleHealth resources. They enable users to make informed decisions that support continuous program improvements and make a positive impact on patient care.

For your convenience, these reports can be exported in a variety of formats, including Excel and PDF documents. If you have any questions or feedback with regards to the use of these tools, please contact telestrokesupport@partners.org.

tPA Timeline

A TeleStroke timeline of events, including from LSW to tPA Administration, with comparison against standard benchmarks will allow you to gauge the expeditiousness of your thrombolytic treatment processes.

[View Report](#)

Patient Location

A comparison of consult type and patient location may help you gauge whether TeleHealth utilization is meeting your expectations across different care settings.

[View Report](#)

NIHSS Analysis

Segments NIHSS results for patients that were and were not administered tPA and/or transferred. Offers insights into the severity of the stroke cases retained by your facility(ies).

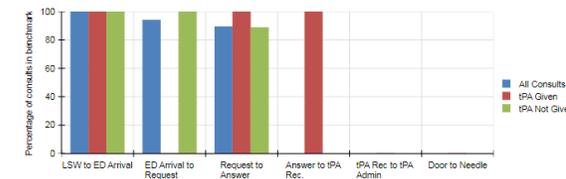

[View Report](#)

Disposition

Displays the recommended disposition of patients by service line, providing valuable insights into TeleHealth-optimized patient triage for your facility(ies).

STROKE AND OTHER COMMON NEUROLOGICAL CONDITIONS

Stroke and Other Common Neurological Conditions covers a variety of essential neurological topics, including vascular neurology, neurocritical care, general neurology, and patient care. The topics were chosen with the purpose of targeting the increasing disparity between demand and availability of neurologists and empowering health care professionals to increase their comfort level in the referral, recognition, and treatment of neurological conditions.

Eleven lectures from world-renown neurologists and neuroscience nurses from Massachusetts General Hospital are currently available in this course. Eight additional lectures are being added to the course and will become available in mid-October 2019.
